

The IR 4.0 Challenges and Opportunities in Malaysia Vision 2030

The Fourth Industrial Revolution (IR 4.0) refers to a new phase in the Industrial Revolution that focuses heavily on interconnectivity, automation, machine learning, and real-time data. (IR 4.0) is expected to change how we live, work, and communicate; it is also likely to change the things we value and the way we value them in the future. ... With technological advances, jobs with these three qualities are most likely to be automated: repetitive. Malaysia is slowly advancing towards Industry 4.0. The Malaysian Ministry of International Trade and Industry (MITI) tabled the National Policy for Industry 4.0 to help advance the countries' businesses and factories. This will ideally help the local industries to increase productivity, efficiency, quality, and to also develop new skills and talent with the people.
